## **FISO TECHNOLOGIES CONFIRMS FIRST DELIVERIES FOR MAJOR CUSTOMER**

**QUEBEC, Quebec —February 24th, 2009—** FISO Technologies, a subsidiary of Roctest Ltd (TSX: RTT) and a leading manufacturer of high-quality fiber optic sensors and signal conditioners has delivered the first units of a new OEM board for temperature measurement to a long-standing OEM partner manufacturing microwave laboratory instrumentation. Delivery of the new signal conditioner, which is 85% smaller than the previous generation, follows extensive development involving prototyping, design, pilot-production, validation and verification. The new board has been re-engineered to improve price competitiveness, while remaining fully compatible with previous generations of systems. This new design further strengthens the long-standing relationship between FISO Technologies and its customer which placed orders valued at more than Cad \$350,000 during the fourth quarter of 2008.

This more compact generation of signal conditioners will reduce the size of the customer's microwave instrumentation which will therefore require less laboratory space. Consequently, combined with the unit's enhanced price competitiveness, FISO expects its customer to increase market share and develop new niche applications, leading to higher sales of its OEM board in 2009. Throughout the last decade, FISO has built an enviable reputation among many suppliers, receiving several rewards for continuous improvement, consistent quality of products and price reduction programs.

"We had to redesign all the electro-optical components and the critical assembly process of the product. We worked closely on development with our partner to ensure that every aspect of the design was fully compatible with both their new and current laboratory instrumentation systems. With thousands of signal conditioners already in the field, full compatibility with current systems was a key deliverable", said Maxim Vachon-Savary, Product Line Manager at FISO Technologies. "We have now completed the delivery of the first lots of production boards and will finish the full transfer in production during the first quarter of 2009", he added.

### **About FISO Technologies Inc.**

FISO Technologies Inc. designs, manufactures and markets fiber optic sensors and high-precision measuring instruments for challenging and demanding applications in the process control, energy, healthcare and defense markets. Its products are mainly sold internationally. The Company headquarters are located in Quebec City, Quebec (Canada).

FISO Technologies Inc. news releases and product information are available on the Internet at: <http://www.fiso.com>

**Caution concerning forward-looking statements**

*Except for historical information provided herein, this press release may contain information and statements of a forward-looking nature concerning the future performance of the Company. These statements are based on suppositions and uncertainties as well as on management's best possible evaluation of future events, and as such involve a number of risk factors. Such factors may include, without excluding other considerations, risks related to foreign exchange fluctuations, evolution in customer demand for the Company's products and services, the impact of price pressure from competitors and general market trends, economic and geopolitical changes. As a result, readers are advised that actual results may differ from expected results. The Company is not required to update or revise publicly its forward-looking statements, except as may be required under applicable law.*
